The team at Cougar Automation is proud to announce that we recently received PLC Modernization certification from Schneider Electric. We join a small group of organisations to receive this certification that highlights the unique level of expertise we can provide to our clients looking to upgrade their PLC systems.

We understand the value in being able to replace the components in legacy systems with those that are best-in-class. The smooth switchover from systems at the end-of-life or retired-service status where no further support or parts are available leads to improved efficiencies and reduced costs. And we do it all while minimising downtime.

Our partnership enables us to provide a full portfolio of modernization and migration services and tools to make the transition easy and seamless.
