

TAP AWARDED SOUTHERN WATER FRAMEWORK AGREEMENT

As the systems integration part of its joint venture Total Automation & Power, Cougar Automation will be delivering both Lot 1 and Lot 2 Frameworks.

Cougar Automation, the system integration part of TAP–Total Automation & Power, are delighted to announce they will be working with Southern Water to deliver both Lot 1 and Lot 2 Frameworks for the provision of Southern Water’s MCC, system integration and small control panels requirements.

The work will be completed by **TAP**, a joint venture between **Cougar Automation** (providing control systems expertise) and **Technical Control Systems** (providing MCC and control panel expertise).

“This initiative is an extension of the strong, trusted relationship we have built over 30 years working with Southern Water,” says Simon Pape, Business Development Manager at Cougar Automation. “We have frameworks in place with other large utilities and are excited to be able to provide our expertise in this area to Southern Water.”

With six offices across the UK, Cougar Automation is able to deliver its services using local, highly qualified project teams providing a personal and in-depth service. Our teams in Waterlooville and Maidstone are located inside Southern Water’s franchise area. TAP has a large facility in Leeds at Technical Control Systems (TCS).
